Mandatory GHG Reporting Deadline is Now September 30, 2011

On March 18, 2011, the USEPA issued a final rule under the Mandatory Greenhouse Gas (GHG) Reporting rule extending the 2010 reporting deadline to September 30, 2011. This deadline was originally March 31, 2011, and was extended to allow EPA to test the system that facilities are required to use to submit the data, give industry the opportunity to learn the system, and provide feedback.

The mandatory GHG Reporting rule requires the reporting of GHG data from large emission sources across a range of industry sectors, as well as suppliers of products that would emit GHGs if released or combusted. EPA believes this rule will aid in policy decisions and the development of future programs for GHG emissions.

Facilities must register with the electronic GHG reporting tool (e-GGRT) no later than 60 days before the reporting deadline. With this reporting deadline extension, the new deadline for registering with e-GGRT is August 1, 2011.
